

AMERICAN CLIMATIC ADJUSTERS

Above is a Diagram view of one pair of American CLIMATIC ADJUSTERS in *rest* position. A full set consists of four or more pairs of CLIMATIC ADJUSTERS, depending on length of Board. An open end Wrench is furnished with each set.

AMERICAN Climatic Adjusters are *not* recommended for correction of (1) wavy surface (unless Top is also resurfaced in usual manner); (2) Tops constructed of poorly machined or improperly seasoned lumber; (3) Tops having *open* glue lines between laminations; and (4) Tops having less than the standard American thickness.

Check Top every week or two (if necessary) with Straight Edge and adjust the "pressure" nut slightly, as required.

Although AMERICAN CLIMATIC ADJUSTERS are fastened to Shuffleboard permanently, they can be unbolted and re-installed on a new Shuffleboard at any time.
