

WHY CLIMATIC ADJUSTERS MAKE A DIFFICULT JOB EASY

More than 2,000 years ago, Archimedes, the great Greek mathematician, said: "Give me a lever long enough, a prop strong enough, and single-handed I can move the world..."

CLIMATIC ADJUSTERS, American's most important invention, utilizes the lever principle to convert *lateral* forces into equalized "push-pull" *vertical* forces on the shuffleboard playing field. Thus, ample power is gently exerted to flex or bend the top into shape — and keep it there!

CLIMATIC ADJUSTERS are perfectly engineered in every detail of design and will not interfere with normal expansion and contraction of the playing field. They are a great boon to shuffleboard owners because they enable anyone to true up the playing field accurately — in a few minutes — using only a wrench. This means practically no maintenance expense, no pleasure lost through having a shuffleboard out of play, while guaranteeing a better, truer game at all times. The money saved through elimination of frequent and expensive resurfacing more than justifies the reasonable cost of CLIMATIC ADJUSTERS.

No longer need you stand helplessly by while your shuffleboard playing field reacts to the whims of the season — to the humidity of the spring and summer, to the dry heat of the fall and winter. A quick, easy and inexpensive cure can be had with AMERICAN CLIMATIC ADJUSTERS. They are real "weather" insurance!

*Now furnished as standard equipment
with every new American
Shuffleboard.*
